Nylon and Polyolefin Spoked Wheels

4605-14 Polyolefin, 4645-16 Nylon or Polyolefin, 4485-20 Nylon

ACE PRODUCTS, INC. offers high impact, quality engineered spoked polyolefin and nylon wheels in three popular sizes: 14", 16", and 20". These spoked wheels are over 30% lighter than metal spoked wheels, yielding freight savings and overall weight reductions without sacrificing strength.

The 20" nylon spoked wheel features a drop center rim designed for heavy duty applications. The drop center design helps prevent tire roll-off when subjected to heavy loads.

The high impact polyolefin wheel material and integrally molded plastic bushings make these wheels capable of withstanding rugged use while retaining their good looks. Nylon material is available on 16" and 20" wheels for those severe applications. Both wheel designs are also available with ball bearings for easy rolling or sintered metal bushings for heavy duty applications.

ACE spoked wheels offer the high tech look preferred over steel wheels. The face of the wheel in the bore area is

designed to have a hubcap look. The back side has the open web look, resulting in an aesthetically pleasing design.

Applications for ACE "no rust" 14", 16", and 20" polyolefin and nylon wheel assemblies include light duty material handling equipment, and lawn and garden equipment. Wheels are available with diamond or rib tread design ACE semi-pneumatic tires. If special tire designs are required for a particular application, ACE PRODUCTS, INC. can custom mold them on special order.

As with all ACE wheel products, custom wheel designs and colors are available.

if it rolls, we have it!
